TRE PUNTI DI FORZA CHE CI DISTINGUONO OUR THREE STRONG POINTS

Inventiva •
Sistema di chiusura TRIS per infissi scorrevoli.
I primi ad avere l'idea...
Oggi ancora inimitati.

Inventiveness •
TRIS closing system for sliding windows.
The first to have the idea...
Still unimitated even today.

Design •
Cremonese DUETTO con meccanismo separato dalla cassa...
Dopo OPERA VIP un altro successo del design targato MEDAL.

Design •
DUETTO cremona bolt with off-board case mechanism...
After OPERA VIP yet a further successful design sporting the MEDAL label.

Dinamicità ed etica commerciale •
Veloci risposte ed assoluta onestà, perché crediamo ancora nei rapporti umani.

Dynamic and principled sales strategy •
Quick and accurate response to every demand because we still believe in customer care.

Scegliere MEDAL vuole dire garantirsi la collaborazione con un partner di grande solidità...

Preferring MEDAL means choosing a dependable partner open to close collaboration at all times....

MEDAL nasce nel 1981 e si pone subito all'attenzione del mercato con tre punti di forza che la distinguono dai concorrenti:

- 1 • Inventiva nella creazione di nuovi prodotti
- 2 • Ricerca di stile ed attenzione al design
- 3 • Dinamicità ed etica commerciale

MEDAL was established in 1981, quickly winning acclaim thanks to its three strong points that positively stand it off from the competition, namely:

- 1• inventiveness in the creation of new products*
- 2• careful and consistent attention to style and design contents*
- 3• dynamic yet principled sales and marketing practices*

Oggi, dopo 20 anni di attività, siamo un'azienda in grado di gestire tutti i processi progettativi, con quattro sedi produttive specifiche per la tipologia del materiale e dei prodotti da lavorare ed una struttura commerciale fortemente orientata al marketing.

After twenty years of experience and growth, the company is now in a position to fully handle all design and production stages throughout thanks to four different facilities, each of which specialised according to the material to be processed and type of product manufactured. A strongly market-oriented sales organisation making for excellent customer servicing and satisfaction ensures its efficient and capillary presence both at home and abroad.

Negli ultimi 10 anni MEDAL ha depositato più di 10 brevetti nazionali 8 europei e 2 internazionali, ponendosi tra i primi posti nel settore per inventiva e capacità di interpretare le esigenze del settore.

Alcuni dei prodotti progettati e industrializzati sono ancora oggi unici nel loro genere.

In the last ten years MEDAL has registered over ten domestic, eight European, and two international patents, thanks to which it may rightly claim to be an undisputed leader for inventiveness in its sector and for its ability to meet the ever more demanding requirements of the market.

Several of the products designed and manufactured by MEDAL are still today unique in their sector.

MEDAL

**UN'AZIENDA CON SISTEMA DI QUALITA' CERTIFICATA ISO 9001-2000
A COMPANY WITH ISO 9001-2000 QUALITY CERTIFICATION**

Direzione generale, uffici ricerca e sviluppo, sede commerciale e logistica di Castel Gelfo, Bologna.

Main offices, R&D department, and sales and logistics departments at Castel Gelfo, Bologna.

MEDAL ha consolidato la sua posizione sul mercato mantenendo un trend di crescita costante...

L'ottimizzazione produttiva e logistica è sempre stato il nostro maggiore obiettivo e la qualità, quella che negli ultimi anni tutti ricercano, non un punto di arrivo ma uno standard da raggiungere.

Anche la nostra azienda è certificata con sistema di qualità ISO 9001, ma per noi non è un riconoscimento ma solo una conferma.

Ogni sede è specializzata ed organizzata per un determinato tipo di lavorazione, ed in grado di soddisfare ogni esigenza.

Sede produttiva di Dogliola, Chieti.

Plant at Dogliola, Chieti.

Panoramica della sezione stampaggio materiali termoplastici.

An overview of the thermoplastic moulding workshops.

Over the years MEDAL has strongly consolidated its market standing thanks to a constant growth trend....

Production and logistics optimisation has always been our number one priority and quality, much pursued by all nowadays, is for us not so much a goal but a standard to be consistently met and maintained. More than a rightful acknowledgement, the Company's ISO 9001 certification is to us first and foremost an undeniable statement of fact.

Each of our production facilities is specialised and organised for a given type of processing and hence perfectly capable of satisfying the most demanding and exacting requirements in its trade sector.

Reparto attrezzeria stampi e lavorazione materiali pressofusi in zama.

Tool shop and die-casting (zamak) production area.

**SIAMO PROGETTISTI E COSTRUTTORI
FULLY IN-HOUSE DESIGN AND PRODUCTION**

Il nostro ufficio tecnico è costantemente impegnato nella ricerca di nuovi prodotti, nel miglioramento dei prodotti esistenti o nello studio di accessori su specifica richiesta dei produttori di profili in alluminio, legno alluminio, PVC...

Our technical department is always at work for developing new products and improving existing ones, or for turning out accessories according to the requirements and specifications of window and door frame builders in aluminium, wood, PVC, and other materials.

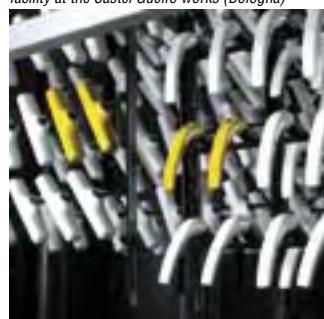

Gli stampi vengono progettati e costruiti all'interno dello stabilimento preposto e solo da personale con esperienza consolidata.

Moulds are all in-house designed and made in a purpose-built plant by skilled and specialised engineers and workers.

ALUMINIUM

Il nostro impianto di lavaggio e verniciatura lavorati in materiale pressofuso (lega di alluminio) nell'unità produttiva di Castel Gelfo (Bologna) / Our die-cast material (alloy and aluminium) washing and painting facility at the Castel Gelfo works (Bologna)

L'ufficio ricerca e sviluppo è costantemente impegnato nell'ideazione e nell'engineering di nuovi prodotti...

Le varie fasi progettuali vengono svolte e controllate in modo coordinato dai tecnici e dagli addetti alla produzione. Tutti gli stampi sono costruiti all'interno della nostra attrezziera con moderne tecnologie e macchine collegate ai software di progettazione. Ogni singolo passaggio viene scrupolosamente monitorato e gli stampi utilizzati sottoposti a continue manutenzioni per garantire qualità costante nel tempo.

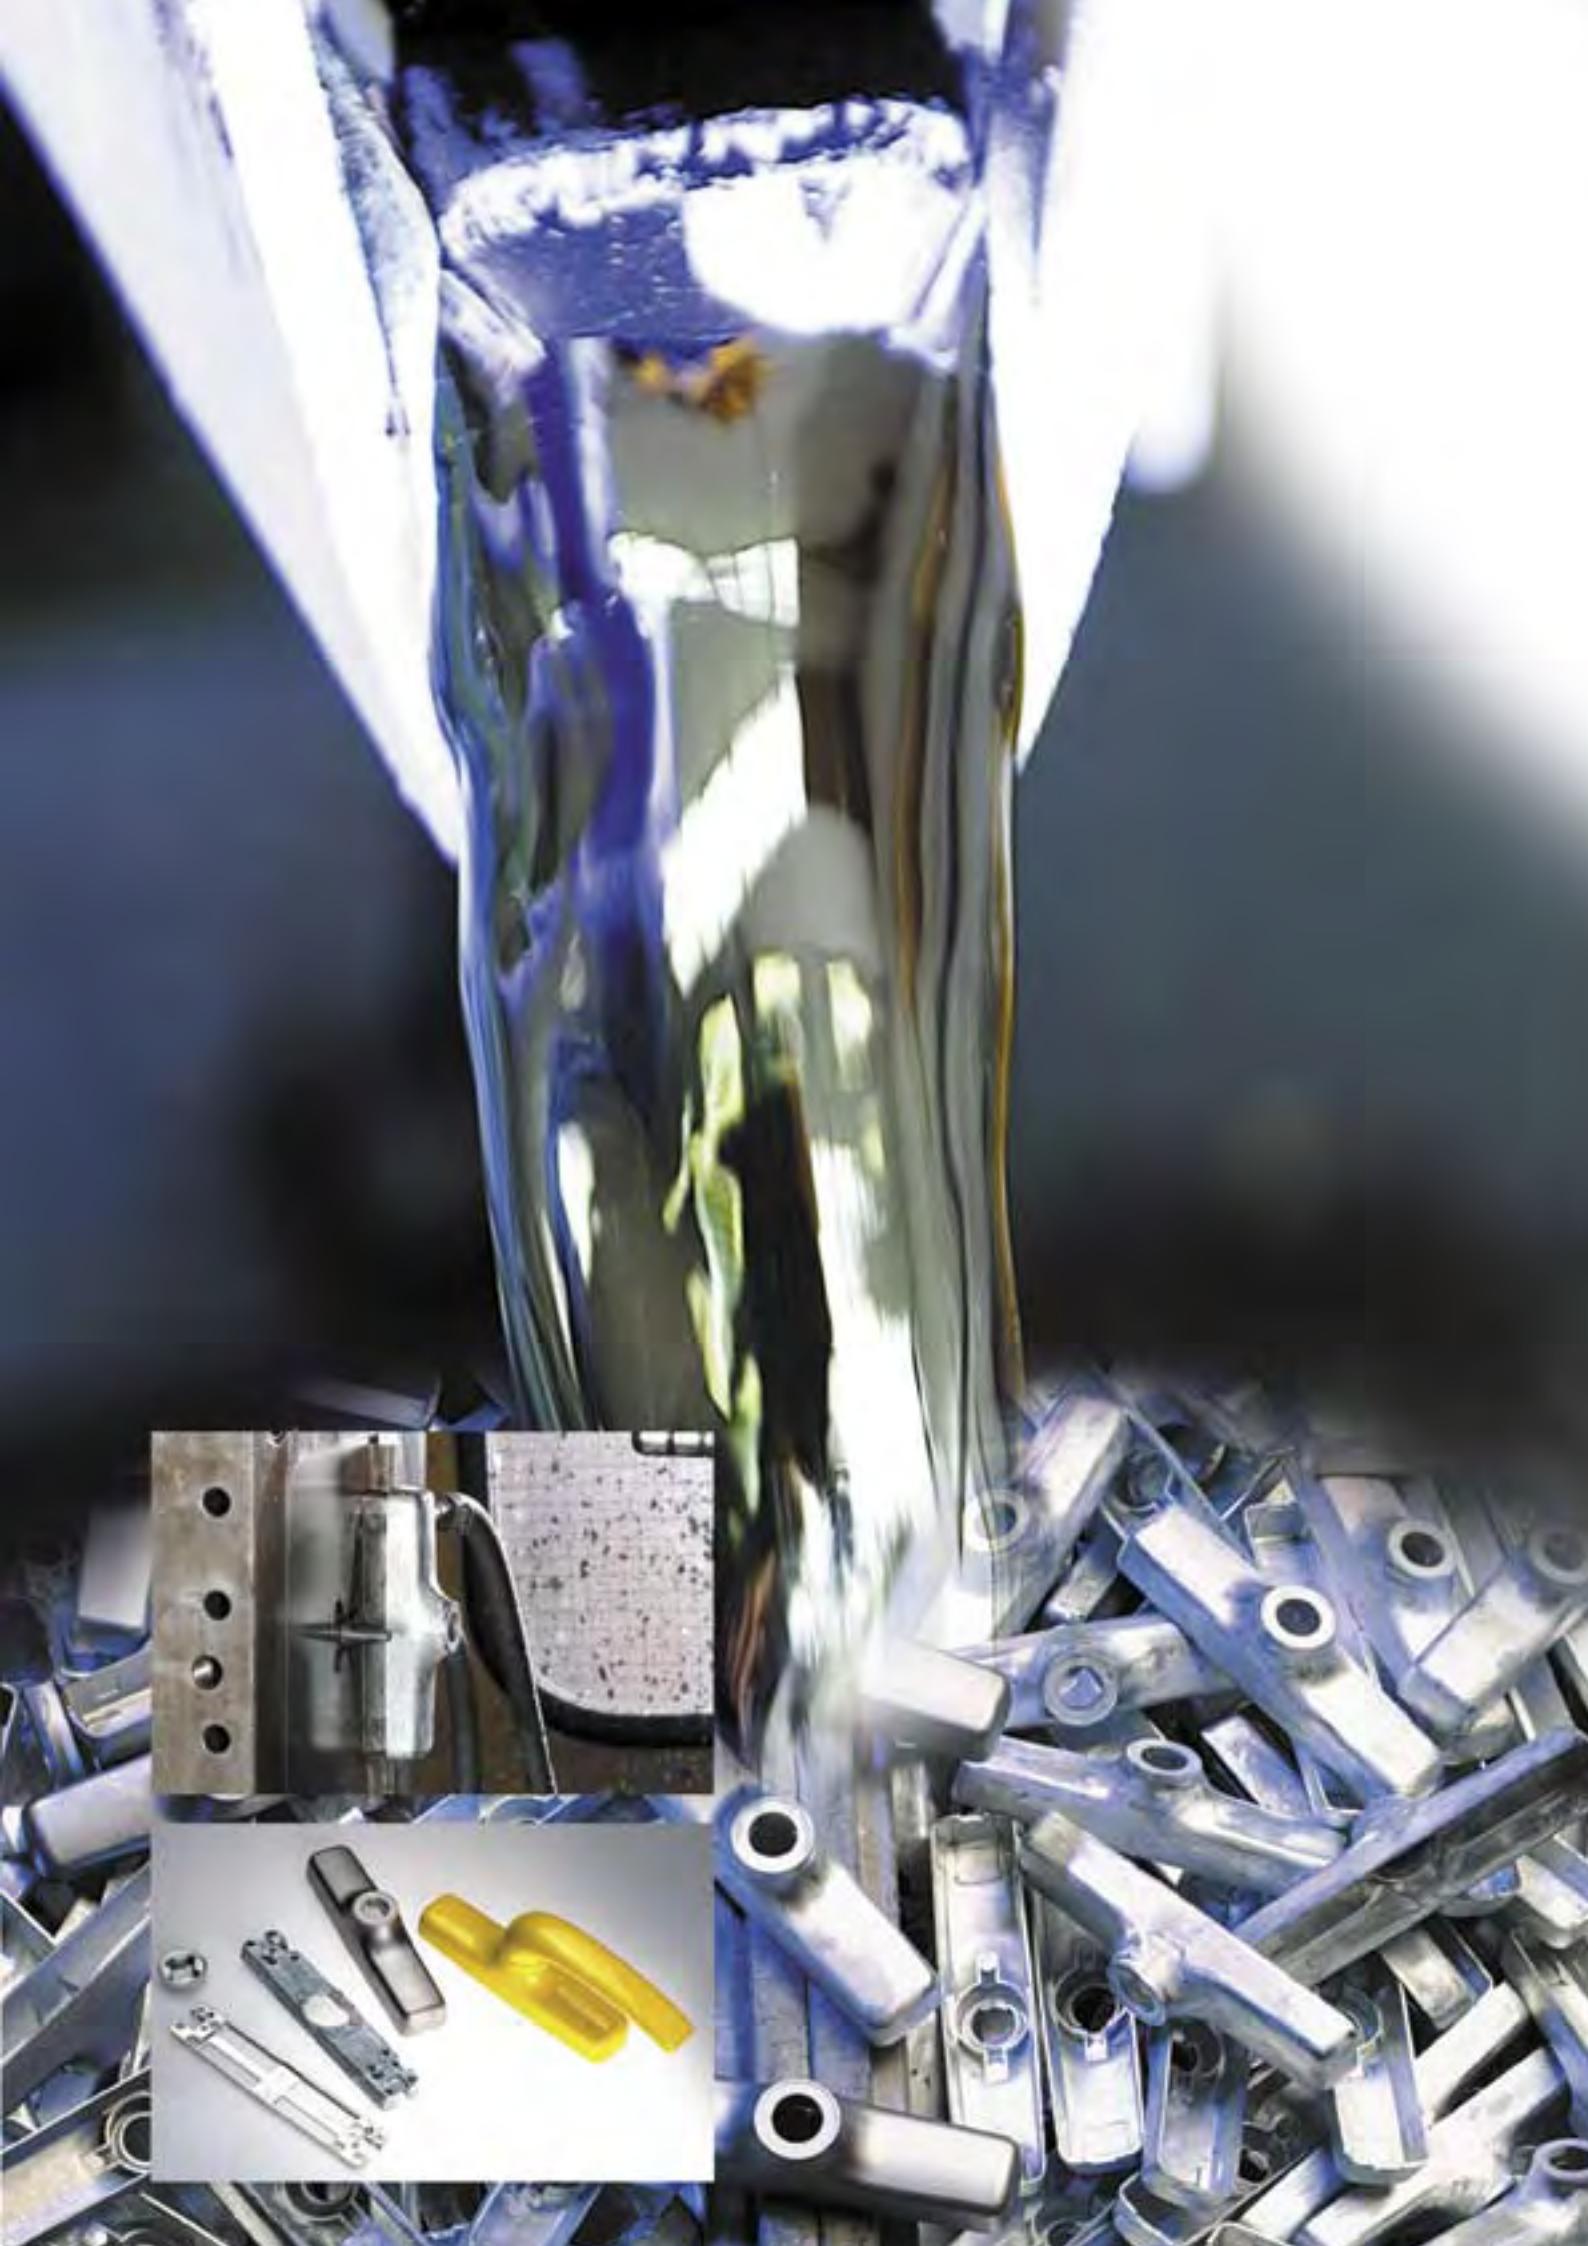

I centri di produzione si estendono su grandi superfici e gestiscono tutte le attività di stampaggio, assemblaggio, confezionamento e movimentazione dei prodotti affidati.

Our R&D department commitment to creating and engineering new products is ongoing....

Each step of each design stage is carefully performed and monitored by a well coordinated team of engineers and specialised production personnel.

All moulds are constructed by our tooling workshop, using state-of-the art technologies and design software-controlled machines.

Stringent controls are performed at each step and stage of design implementation and mould construction, and the moulds themselves undergo careful routine maintenance to ensure their perfect working efficiency over time. Workshops occupy an extensive area and are perfectly self-sufficient for all moulding, mounting, packaging, and handling operations on whatever type of product they are in charge.

**DOMINIAMO OGNI FASE DEL NOSTRO LAVORO
FULL MASTERY OF ALL PROCESSING OPERATIONS**

Gli stampi prodotti dalla nostra attrezziera vengono regolarmente revisionati per assicurare produzioni sempre costanti e prive di difetti di stampaggio...

Periodic routine inspection of all moulds turned out by our tooling workshop ensure production consistency and zero-defect moulding over time....

Anche l'esperienza nella meccanica di precisione è una peculiarità che ci consente di ottenere sempre il massimo della perfezione.

Thanks to our long-standing experience in the field of precision mechanics, yet another one of our strong points, perfect results are ensured every time.

NYLON

Linee automatizzate ed una corretta programmazione lavori, assicurano una produzione costante di tutti gli accessori a catalogo.

Consistent availability of all catalogue-listed items and accessories is ensured thanks to perfect work scheduling and fully automated lines.

Standard di produzione elevati garantiti dall'autonomia delle nostre linee...

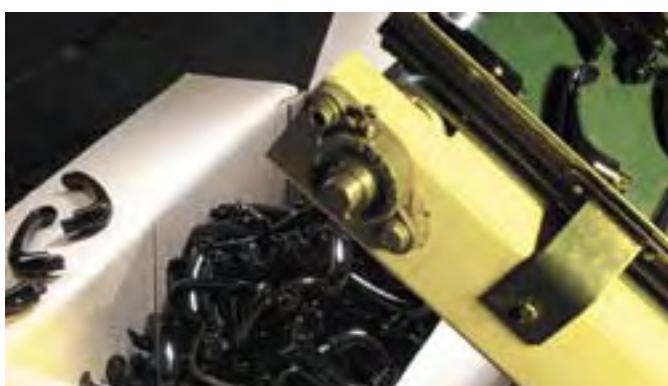

Our fully automated lines ensure high production standards....

Un'attenta programmazione dei cicli di lavoro in tutte le sue fasi, dalla costruzione degli stampi allo stampaggio e assemblaggio, ci consente di garantire il valore degli accessori prodotti, anche in termini di durata nel tempo, per la qualità dei materiali utilizzati e per il grado di precisione delle lavorazioni.

Careful job planning of all production stages, from mould construction to casting and assembly, the use of quality materials throughout, and precision workmanship are a guarantee of the superior quality of our items, as also amply borne out by their long work-life.

Sapere dominare ogni fase del nostro lavoro, è sempre stato per noi indispensabile presupposto per una corretta crescita aziendale.

Full mastery of all processing stages has always been a key factor in our company strategy for growth and development.

LOGISTICA E DISTRIBUZIONE LOGISTICS AND DISTRIBUTION

Grazie alla dinamicità commerciale, all' organizzazione distributiva e al continuo rinnovo dei suoi accessori, MEDAL conquista notorietà e quote di mercato...

MEDAL's growth on the market owes much to its dynamic sales and marketing strategy, an efficient and capillary sales network, and ongoing product renewal....

Più di 2.000 mq di magazzini per lo stoccaggio, il confezionamento e la spedizione degli accessori

Product storing, packaging and shipping space extends over 2,000 square metres.

La capacità di stoccaggio dei prodotti finiti è ampia...

I nostri centri logistici, estesi su ampie superfici, sono dislocati in aree strategiche e gestiscono tutta l'attività di movimentazione e distribuzione dei prodotti attraverso trasportatori aziendali, per il territorio nazionale, o specializzati per il mercato europeo o extraeuropeo.

La rapidità delle nostre procedure di evasione degli ordini è data quindi dalla grande disponibilità di accessori finiti, provenienti dalle varie unità di produzione, sempre disponibili per ogni richiesta.

There's never any shortage of finished product store space....

Our spacious logistics stations are strategically located and are all perfectly capable of managing all product handling and delivery operations, availing themselves of company or specialised carriers for the domestic, European, and extra-European markets, respectively.

Consistent finished product availability supplied by our various production units means quick order processing for any request.

E' possibile ordinare articoli con finiture diverse da quelle in tabella. In tal caso saranno da concordare di volta in volta prezzo e tempi di consegna.
ATTENZIONE: i colori stampati possono differire dai colori reali.

If desired and subject to prior mutual agreement as to price and delivery times, items are available in finishes other than those listed in the table.

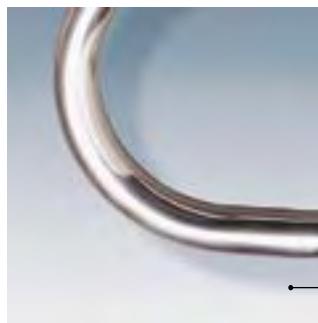

NOTE: allow for possible differences in printed colours compared to real ones.

MANIGLIONI
TUBULAR HANDLES

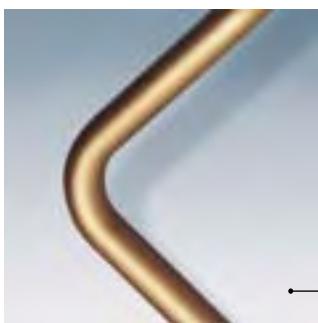

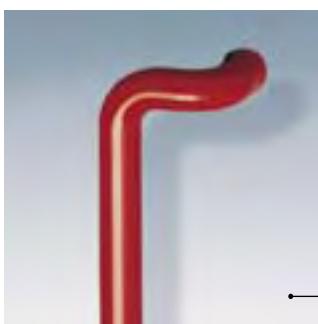

**alluminio verniciato
painted aluminium**

**acciaio inox
lucido o satinato
bright or satin-finish
stainless steel;**

**ottone lucido
polished brass**

**nylon
nylon**

La linea "BOLOGNA" comprende una gamma di maniglioni tubolari dal design sobrio ma moderno e filante. Sono disponibili in diversi materiali, per ogni esigenza installativa ed estetica, per adattarsi ai colori degli infissi e all'installazione richiesta:

- alluminio verniciato/ossidato
- acciaio inox lucido o satinato
- ottone (in versione lucido)
- nylon

Tutti i materiali sono di prima qualità e trattati per essere inalterabili agli agenti atmosferici.

Di rapido montaggio, la linea "BOLOGNA" si applica sia su infissi in alluminio che in legno o cristallo, con profili piani o a scalino, utilizzando appositi kit accessori.

The "BOLOGNA" line includes a range of tubular handles with a simple yet modern and streamlined design. Accessories are available in a variety of materials and finishes to suit all installation, styling, and colour matching requirements as follows:

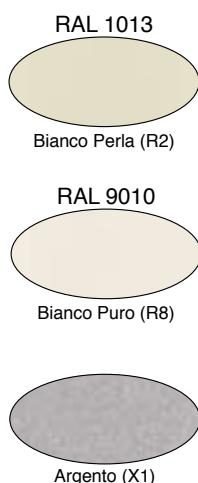

- painted/anodised aluminium;
- bright or satin-finish stainless steel;
- brass (in polished version);
- nylon.

All the materials are high quality and resistant to weather conditions. The easy to assemble "BOLOGNA" line can be fitted on doors and windows in aluminium, wood or glass, with flat or stepped borders, using appropriate accessory kits.

La MEDAL s.r.l. si riserva la facoltà di modificare in qualsiasi momento e senza preavviso le caratteristiche tecniche dei prodotti rappresentati nel presente catalogo.

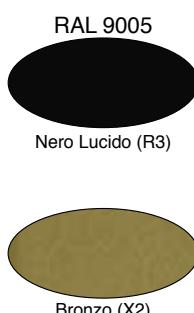

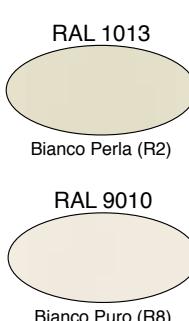

MEDAL s.r.l. reserves the right to modify the technical characteristics of the products illustrated in this catalogue at any time and without prior warning.

Bronzo (X2)

Materiali

Tutte le linee sono prodotte con ottimi materiali e la produzione è sottoposta ad un rigoroso controllo qualità (MEDAL è certificata ISO 9001).

- Alluminio EN AW 6060 UNI EN 573-3
- Acciaio inox AISI 304 ricotto (in versione inox lucido o satinato)
- Ottone lucido (63 cotto)
- Nylon PA 6 stampato ad iniezione

Materials

All items are made out of excellent materials and undergo rigorous quality controls (MEDAL is ISO 9001 certified).

- EN AW 6060 UNI EN 573-3 Aluminium
- AISI 304 annealed stainless steel (available in the polished or satin-finish version)
- Polished brass (63 heat-treated)
- PA 6 injection moulded nylon

Acciaio inox

Materiale elegante, luminoso di grande resistenza meccanica, pulito, inattaccabile dagli agenti atmosferici, particolarmente nella versione lucida in quanto il trattamento di lucidatura impedisce agli agenti corrosivi di trattenersi. La versione satinata, presenta sottilissime rigature parallele di ottimo impatto estetico.

Stainless steel

A refined material, bright and with great mechanical resistance, clean and unassailable by atmospheric agents, especially in the polished version as polishing prevents the attack of corrosive agents.

The satin-finish version features a pattern of thin parallel stripes that makes it visually extremely appealing.

Ottone

L'ottone, lega di rame e zinco, consente ottime soluzioni per particolari installazioni estetiche. Resistente alla corrosione, ha una lunga durata nel tempo.

Brass

Brass, a copper and zinc alloy, is ideal whenever an installation calls for a special aesthetic finish. Other advantages include excellent corrosion-resistance and a long work-life.

Nylon

L'utilizzato di questo polimero rende particolarmente ottimale la produzione di maniglioni colorati con finiture estetiche di ottimo livello e con caratteristiche di resistenza all'usura, all'invecchiamento e alle basse temperature.

Nylon

When bright colours are desired or colour matching a must, this polymer is the right and pleasantly appealing solution. Excellent resistance to everyday wear-and-tear, to natural aging, and to low temperatures are other advantages afforded by this versatile material.

Pulizia

Per pulire i maniglioni usare solo un panno morbido leggermente inumidito. Evitare solventi e prodotti chimici.

Cleaning

Only clean panic bars with a damp piece of soft cloth. Use of solvents, detergents, or chemical products in general is to be strictly avoided.

**E' possibile ordinare la linea maniglioni in alluminio o nylon con altre colorazioni RAL (vedi cartella colori principale) concordando prezzo, quantità e tempi di consegna.

Aluminum and nylon panic bars in other RAL colours (see main colour card) are available on request subject to prior price, quantity, and delivery time agreement.

MANIGLIE E POMOLI
HANDLES AND KNOBS

**nylon
nylon**

Morbide linee, curve sinuose ed ampi raccordi, per un design raffinato che si adatti agli infissi più moderni. Robusti materiali ed eleganti finiture di pregio o classiche forme senza tempo, per accontentare ogni serramentista.

Una conferma della filosofia MEDAL orientata alla ricerca di uno stile unico, diverso.

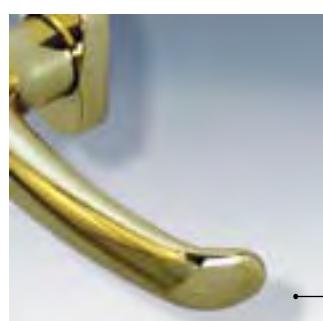

- nylon
- alluminio verniciato
- trattamenti speciali

**alluminio verniciato
vernished aluminium**

Tutti i materiali, nylon, alluminio verniciato nei vari colori o nei trattamenti speciali, sono di prima qualità, trattati per essere inalterabili agli agenti atmosferici e durevoli nel tempo.

I componenti dei meccanismi interni, alcuni di nuova concezione, sono predisposti con scatto di ritorno in posizione orizzontale e testati da milioni di pezzi prodotti.

**trattamenti speciali
special treatments**

Supple and curvy lines and wide and firm grips make for a refined design ideal for modern-day doors and windows. Sturdy and resistant materials, precious and refined finishes, ever-green forms of timeless elegance are sure to meet the requirements of even the most demanding builder and installer. All items fully witness to MEDAL's basic philosophy, which is to create a unique style of great and universal appeal, yet suitable for even the most discerning customer.

- nylon
- painted aluminium
- special treatments

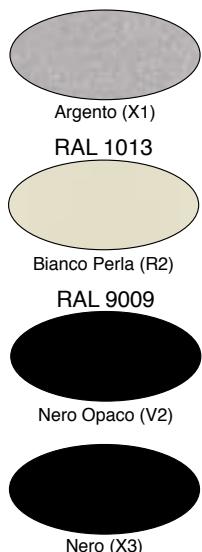

Materials, be they nylon or painted aluminium in various colours and specially treated, are all of prime quality and ensured to be perfectly weather proof and with a long life. All internal mechanisms, some of which based on a completely new concept, feature a horizontal return release, fully tested thanks to the millions of pieces already produced.

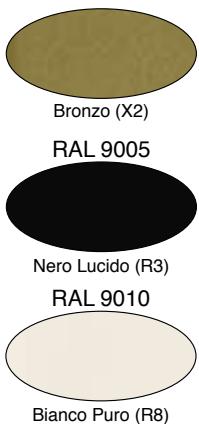

La MEDAL s.r.l. si riserva la facoltà di modificare in qualsiasi momento e senza preavviso le caratteristiche tecniche dei prodotti rappresentati nel presente catalogo.

MEDAL s.r.l. reserves the right to modify the technical characteristics of the products illustrated in this catalogue at any time and without prior warning.

Colorazioni maniglie in nylon
Nylon handles colours

Maniglie con trattamenti PVD
PVD-treated handles

Materiali

Tutte le maniglie sono prodotte con ottimi materiali e la produzione è sottoposta ad un rigoroso controllo qualità (MEDAL è certificata ISO 9001).

- Nylon PA 6 stampato ad iniezione
- Alluminio pressofuso o estruso (EN AW 6060 UNI EN 573-3, ricotto)
- Ottone lucido

Materials

All handles are made out of first-rate materials and undergo stringent quality controls (MEDAL is ISO 9001 certified).

- PA 6 injection moulded nylon
- Die-cast or extruded aluminium (EN AW 6060 UNI EN 573-3, annealed)
- Polished brass

Trattamento PVD

Il rivestimento PVD è una recentissima tecnologia nata per aumentare la resistenza superficiale dei materiali soggetti a forte usura. Per la caratteristica estetica particolare delle colorazioni, questo trattamento viene oggi utilizzato anche per le nostre linee di maniglie in ottone o alluminio pressofuso al fine di garantire la massima inalterabilità superficiale nel tempo. Questo tipo di tecnologia, assolutamente ecologica, consiste nel deposito in atmosfera controllata di uno strato di Nitruro di Zirconio (vantaggiosa alternativa alla classica cromatura galvanica, fortemente inquinante...).

I vantaggi del rivestimento PVD sono:

- Grande resistenza all'abrasione
- Grande resistenza alla corrosione
- Colori duraturi e inalterabili nel tempo (resistenti alle elevate temperature)
- Aumento dell'effetto estetico
- Assenza di effetti inquinanti

L'utilizzo del rivestimento PVD, quindi, contribuisce a migliorare l'aspetto estetico/installativo delle maniglie che per le loro particolari colorazioni e per il tipo di materiale si adattano per applicazioni su infissi importanti.

PVD coating

PVD coating is a recently developed technology ideal for enhancing the surface resistance and durability of materials subject to heavy-duty applications. What's more, the treatment confers an appealing colour. That's why MEDAL has adopted the technique for its brass and die-cast aluminium handles, thus combining good looks with maximum surface resistance over time. The treatment is wholly environment-friendly and consists in applying a zirconium nitride layer under controlled atmosphere conditions, an undisputed improvement over the traditional and highly polluting chromium plating technique.... Other advantages of PVD coating include:

- high abrasion resistance;
- high corrosion resistance;
- long-lasting and persistent colours capable of safely withstanding high temperatures;
- enhanced appearance;
- no processing-derived pollution.

PVD coating is decidedly an aesthetic enhancer making for easy adaptation to all installation requirements. The special colours and materials used for the handles undergoing such treatment make them especially suitable as fixtures for important doors and windows.

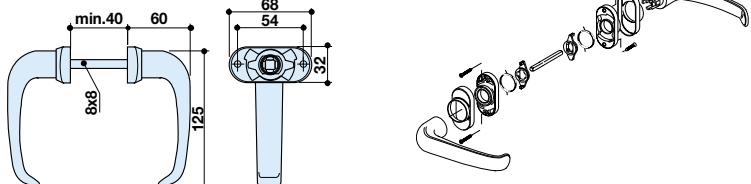

**E' possibile ordinare la linea di maniglie in alluminio o nylon con altre colorazioni RAL (vedi cartella colori principale) concordando prezzo, quantità e tempi di consegna./Items in the panic bar line are available in other RAL colours on request (see main colour card), subject to prior price, quantity, and delivery time agreement.

Catalogo generale 2007 / General catalogue 2007

KIT PER INFISSI SCORREVOLI

SLIDING DOORS AND WINDOWS KITS

La produzione di MEDAL, riferita ai kit per infissi scorrevoli, ha ormai conquistato una posizione leader sul mercato con 45 diversi tipi di profili. La gamma presentata è probabilmente quanto di più completo si possa proporre al settore con particolare attenzione all'elemento caratterizzante il kit: il carrello. Per questo importante elemento abbiamo studiato caratteristiche tecniche particolari per assicurare portate elevate ed ampie possibilità di regolazione.

Una comoda tabella comparativa Vi consentirà di identificare immediatamente il tipo di carrello utilizzabile per il Vostro profilo.

Quasi tutte le serie vengono elencate in quattro versioni per ogni esigenza di installazione:

- modello base
- base con maniglie
- base con squadrette
- base con maniglie e squadrette

MEDAL's sliding door/window kits available in forty-five different sections have taken the market by storm, gaining the Company an undisputed leadership in the sector.

The range is truly complete like no other. Special attention has been given to one of the most important parts in the kit, the sliding carriage.

High loading capacity and a wide adjustment range are the main features rightly recommending this important component.

A comparative table makes selecting the most suitable carriage for one's section quick and easy.

Almost all series come in four versions for all installation requirements, namely:

- base model
- handle-integrated base model
- bracket-integrated base model
- handle and bracket-integrated base model.

I carrelli

Il carrello è un accessorio che riveste un'importanza strategica negli scorrevoli per le sue intrinseche caratteristiche funzionali. I carrelli MEDAL sono progettati seguendo criteri di funzionalità testati in applicazioni di modelli precedenti e sono costruiti con diversi materiali in funzione della portata a cui devono sottostare e dalle dimensioni dell'infisso scorrevole.

Tutta la gamma, in continua evoluzione, mantiene alti livelli qualitativi ed accomuna caratteristiche tecniche quali:

- sistema di autobilanciamento
- meccanismo di registrazione mediante vite a brugola, permette una registrazione più sicura e veloce (fino a 6 mm)
- perfetta adattabilità al telaio
- ruote realizzate in policarbonato rinforzato e cuscinetti a sfera in acciaio temperato e cementato
- spine in acciaio
- ispezionabilità delle ruote consentita ad anta montata

Modello EVO 96 e MAXI

Maggiore possibilità di regolazione rispetto ai modelli precedenti, aspetto che li rende praticamente universali, indipendentemente dalla sovrapposizione al telaio.

Grazie alla particolare forma esterna, che permette una maggiore escursione della cassa interna, si ha un aumento della regolazione del + 30%.

La particolare forma costruttiva, insieme ai cuscinetti, contribuisce ad elevare la portata dei nostri carrelli.

Il carico sopportato dal carrello viene completamente assorbito dalla cassa esterna senza che questa subisca alcuna deformazione laterale.

Il carico viene infatti uniformemente distribuito e non concentrato su un unico punto d'appoggio (assenza del perno centrale di collegamento cassa esterna/interna).

Cassa interna mod. EVOLUZIONE (K100)

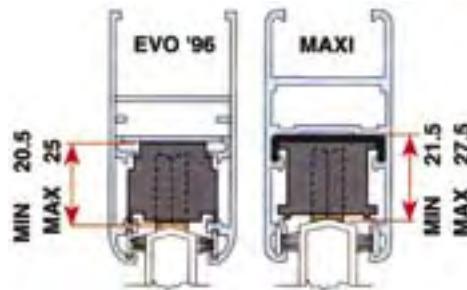

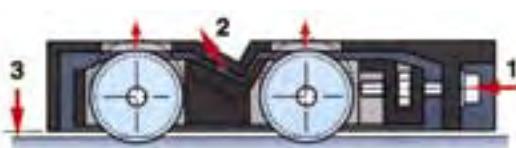

- nylon caricato con fibra di vetro

Cassa interna mod. EVO 96 (K111)

- in zama

Cassa interna mod. MAXI (K250)

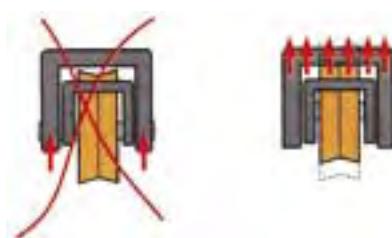

- in zama

+ 30%

La cassa esterna aperta permette una maggiore escursione del rullo:
regolazione aumentata del 30%.

*The open outer casing allows greater travel of the roller:
adjustment increased by 30%*

Carico uniformemente distribuito sulla cassa esterna
Load evenly distributed on the outer casing

The carriage

The carriage is a strategically important accessory in sliding doors and windows due to its intrinsic functional characteristics.

The MEDAL carriages are designed in accordance with functional criteria tested in previous models, and constructed from various materials depending on the weight they have to support and the dimensions of the sliding door or window.

The entire range, in continual evolution, maintains high quality levels and common technical features, such as:

- self-balancing system
- adjustment mechanism by means of socket-head screw ensures safe and fast adjustment (up to 6 mm)
- perfect adaptability to the frame
- reinforced polycarbonate wheels and ball bearings in hardened and casehardened steel
- steel pin
- the wheels can be inspected even with the door/window already fitted

Model EVO 96 and MAXI

Greater adjustment possibility with respect to the previous model, making it practically universal, regardless of whether it overlaps the frame.

The particular shape of the outer casing, which allows greater travel of the inner casing, provides an increase in adjustment of + 30%.

The particular construction shape, together with the bearings, helps to increase the load-bearing capacity of our carriages. The load supported by the carriage is completely absorbed by the other casing without this causing any lateral deformation. The load is in fact uniformly distributed and not concentrated on just one support point (absence of outer/inner casing central connection pin)

Inner casing mod. EVOLUZIONE (K110)

- nylon reinforced with fibreglass

Inner casing mod. EVO 96 (K111)

- zamak

Inner casing mod. MAXI (K250)

- zamak

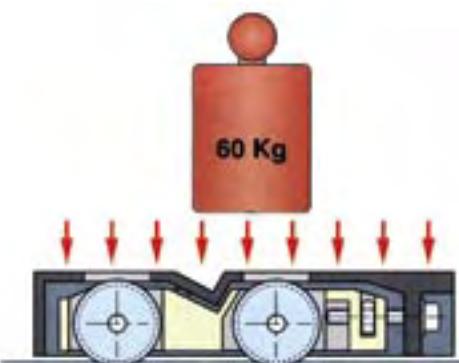

Cuscinetti ad alta portata,
sono stati sottoposti a severe prove di carico negli uffici di ricerca e sviluppo e confrontati con prove su altri carrelli esistenti sul mercato.

Le conclusioni si possono riassumere nella seguente tabella:

carrello EVOLUZIONE e K210

a 2 ruote da 7 mm
con cassa interna in nylon

carico di garanzia 60 kg

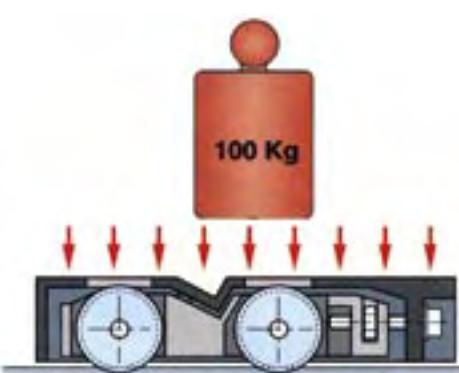

Art. EVOLUZIONE e K210, cassa interna in nylon
Art. EVOLUZIONE and K210, nylon inner casing

carrello EVO 96 e MAXI

a 2 ruote da 9 mm
con cassa interna in zama

carico di garanzia 100 kg

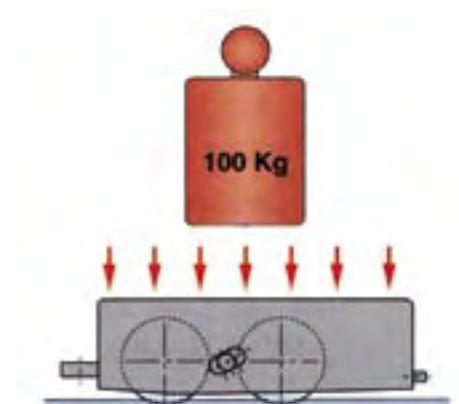

Art. EVO 96 e MAXI, cassa interna in zama
Art. EVO 96 and MAXI, zamak inner casing

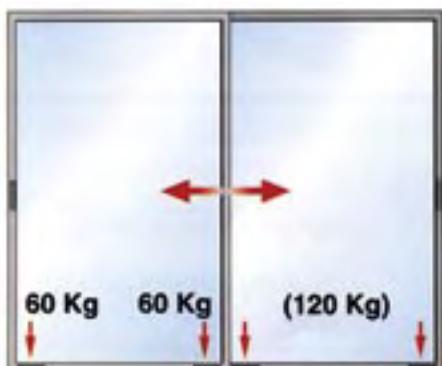

carrello K170 e K180

a 2 ruote da 7,5 mm
con cassa esterna in zama e
interno in nylon caricato vetro

carico di garanzia 100 kg

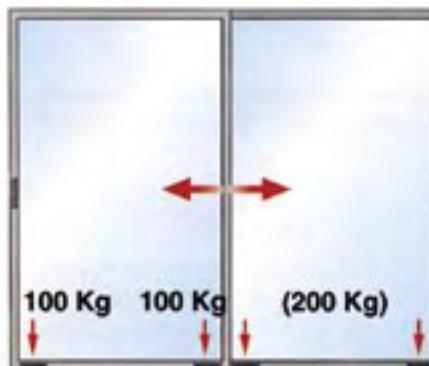

Art. K170 e K180, cassa interna in nylon
Art. K170 and K180, nylon inner casing

Carrello EVOLUZIONE e K210, portata 120 Kg per anta

EVOLUZIONE and K210 carriage, capacity 120 kg per window/door

Carrello EVO 96 e MAXI, portata 200 Kg per anta

EVO 96 and MAXI carriage, capacity 200 kg per window/door

High capacity bearing,
subjected to strict resistance testing
in the research and development
laboratories and compared with tests
on other carriages on the market.

The conclusions can be summarised
in the following table:

EVOLUZIONE and K210 carriage

with 2 7 mm wheels and
nylon inner casing

guaranteed resistance 60 kg

EVO 96 and MAXI carriage

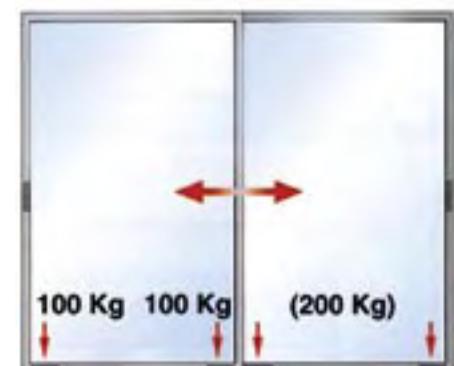

with 2 9 mm wheels and
zamak inner casing

guaranteed resistance 100 kg

K170 and K180 carriage

with 2 7,5 mm wheels and zamak
outer casing and fibreglass
reinforced nylon inner casing

guaranteed resistance 100 kg

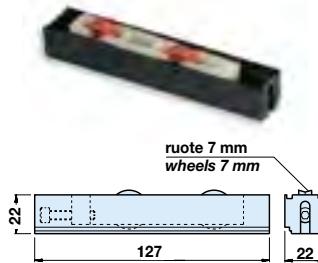

Carrello K170 e K180, portata 200 Kg per anta

K170 and K180 carriage, capacity 200 kg per window/door

Pensare ad un prodotto semplice, come le maniglie ad incasso, e trovare comunque qualcosa di nuovo da proporre non è un compito facile. Eppure nella nuova versione della maniglia ad incasso MITA, modello arrotondato, abbiamo per primi introdotto alcune sostanziali differenze che facilitano il lavoro dei serramentisti. Per esempio per quanto riguarda i punti "debolì" di questo accessorio, il nasello e l'aggancio.

Grani per registrazione
millimetrica del nasello
Lock pin adjustment dowel

Grani per serraggio
paracolpi /
*Bump stop
tightening dowels*

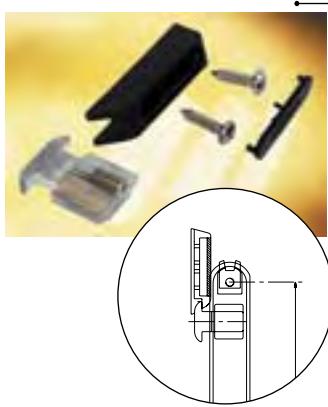

Nuovo sistema di fissaggio e registrazione del nasello:

- il nasello viene assemblato direttamente sulla maniglia non ancora installata
- un grano, in acciaio inox, agevola la regolazione del nasello con una registrazione millimetrica
- con 2 grani in acciaio inox premontati si blocca un paracolpi al nasello per un serraggio finale ancora più solida

Coming up with something truly innovative for a simple product such as a flush-mounted handle is no easy task! But that's exactly what we did with the new version of the rounded model of the MITA flush-mounted handle. The highly original characteristics featured by the new version are all aimed at making the builder's and installer's job easier. Special attention has been given to improving the notoriously weak points of this type of fitting, such as the lock pin and the clip fitting.

The new lock pin fastening and adjusting system permits:

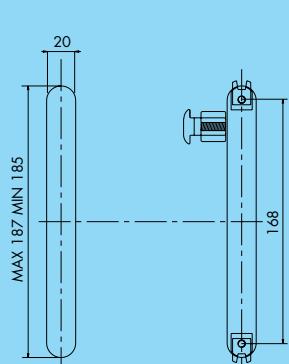

- mounting of the lock pin directly on the handle before installation;
- easy fine millimetric adjustment of the lock pin by means of a stainless steel dowel and blocking of a bump stop against the lock pin by means of two factory-fitted stainless steel dowels that makes for tighter final fastening.

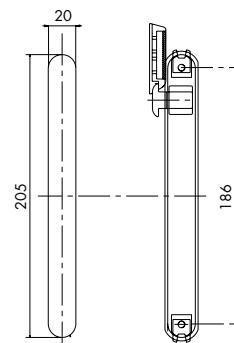

- Nuovo sistema di aggancio SENZA LAVORAZIONE sul telaio. Evidente il vantaggio di installare un riscontro utilizzando semplicemente un cacciavite e due viti autofilettanti.
- Molla di ritorno disattivabile per particolari esigenze installative
- Quattro modelli disponibili con interassi variabili

Cremone bolt OPERA VIP, EUROPA colors

Cos'è la CHIUSURA TRIS?

"TRIS" è un sistema brevettato da MEDAL che permette di utilizzare sugli infissi scorrevoli da 3 a 4 punti di chiusura. Unico nel suo genere consente inoltre l'applicazione di una cremonese sull'anta principale interna (OPERA VIP, nella versione con o senza chiave) e di una chiusura a doppia mandata sulla seconda anta (EUROPA, nella versione con o senza chiave), aspetto fino ad ora impossibile per gli scorrevoli. Il sistema "TRIS", con l'utilizzo di appositi compensatori, si adatta alla maggior parte di profili per scorrevoli esistenti sul mercato.

- **SEMPLICE DA MONTARE:** poche elementari operazioni, perché tutti i componenti sono studiati per adattarsi ai profili in modo perfetto, limitando l'utilizzo di viti.

- **ROBUSTA:** un sistema sicuro, costruito con profili ed accessori che garantiscono rigidità alla struttura
- **DUE POSSIBILITÀ APPLICATIVE:** il sistema permette l'applicazione di una cremonese OPERA (un prodotto qualitativamente prestigioso e di raffinato design), oppure una chiusura ad incasso se si desidera la sovrapposizione delle ante.

- **FUNZIONALE** appena montato si fa apprezzare per la precisione di funzionamento, una apertura ed una chiusura decisa ma silenziosa.

- **INVISIBILE** tutti i componenti di collegamento si inseriscono all'interno dei profili. Anche ad infisso aperto non si nota alcuna applicazione.

La MEDAL s.r.l. si riserva la facoltà di modificare in qualsiasi momento e senza preavviso le caratteristiche tecniche dei prodotti rappresentati nel presente catalogo.

Cos'è la CHIUSURA TRIS?

"TRIS" is a system patented by MEDAL which makes it possible to use from 3 to 4 closing points on sliding windows.

This unique system also makes it possible to fit a cremone bolt on the main inner window (TRIS opera VIP, with versions and without key) and a double lock closing on the second window (TRIS EUROPA, with versions and without key), formerly impossible on sliding windows. With the use of specific adapters, the "TRIS" system can be fitted to the majority of sliding window sections currently on the market, as shown in the cross-sections illustrated here.

- **SIMPLE TO FIT:** just a few quick and simple operations, since all the components are designed to adapt to the sections perfectly, reducing the number of screws needed.

- **STURDY:** a secure system, consisting of sections and accessories that ensure a rigid structure

- **TWO APPLICATION POSSIBILITIES:** The system is suitable for the mounting of an OPERA cremone bolt (a refined product of exquisite design that adds a touch of prestige to any ambience), or for a concealed solution if casement-overlapping is preferred.

- **FUNCTIONAL** immediately appreciable thanks to the functioning precision with firm yet silent opening and closing

- **INVISIBLE** all the connecting components are enclosed inside the sections. Even when the window is open, the system is invisible.

MEDAL s.r.l. reserves the right to modify the technical characteristics of the products illustrated in this catalogue at any time and without prior warning.

**OPERA VIP in alluminio
OPERA VIP in aluminium**

Attenzione! La fornitura delle cremonesi viene eseguita a "CIFRATURA UNICA"

CREMONESI
CREMONE BOLTS

OPERA

Un successo che dura da 10 anni
A ten-year long success story

“OPERA”, “OPERA VIP” e “LINEA2”, “DUETTO” e “IRIS” sono sinonimo di cremonese:

uno stile inconfondibile, una meccanica sicura, una predisposizione universale per sistemi ad anta o anta ribalta, per scorrevoli e persiane.

Lo stile particolarmente raffinato del loro design, i materiali di lavorazione impiegati e concetti di montaggio innovativi mai introdotti prima, ne fanno un punto di riferimento nel mercato, oggi ulteriormente impreziositi dai vantaggi del trattamento PVD.

Tutte le cremonesi in versione “Anta ribalta” sono predisposte con scatto di arresto a 90° e 180°.

Le cremonese OPERA è disponibile anche in ottone lucido.

“OPERA”, “OPERA VIP” and “LINEA2”, “DUETTO” and “IRIS” – THE CREMONE BOLT

This set of products combine style at its appealing best with an absolutely dependable mechanics and are designed for being universally adaptable to swing or turn-and-tilt casements, sliding and louvered shutter door and window systems. Refined appearance, top quality materials, and highly innovative mounting systems have made them a sure reference for the market. Now also available in the PVD-coated version for a touch of extra refinement.

All cremona bolts in the “turn-and-tilt-casement” version are fitted with a catch at 90° and 180°.

The OPERA cremona bolts are also available in the polished brass version.

OPERA VIP

L’evoluzione e l’innovazione della cremonese
Evolution and innovation in the cremone bolt system

Tutte le cremonesi in versione “Anta ribalta” sono predisposte con scatto di arresto a 90° e 180°.

Le cremonese OPERA è disponibile anche in ottone lucido.

DUETTO

La più compatta; per aperture esterne/interne (persiane, finestre)
Compact plus; for out- and indoor opening (louvered shutters, windows)

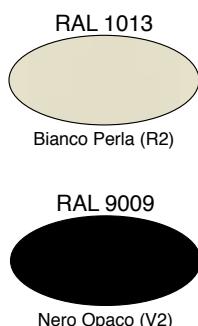

IRIS

Linea morbida e filante adatta per tutti i tipi di infissi
Soft and flowing lines for all types of windows

Colorazioni cremonesi RAL base
Cremona bolts colours (standard RAL)

Altri RAL *
Other RAL *

Cremonesi con trattamenti galvanici e PVD
Electroplated and PVD-coated cremona bolts

Materiali

Tutte le linee sono prodotte con ottimi materiali e la produzione è sottoposta ad un rigoroso controllo qualità (MEDAL è certificata ISO 9001).

Le nostre cremonesi sono costruite con i seguenti materiali:

- Alluminio pressofuso
-meccanismi interni
(Lega zama 12-15 ISO EN 1774)
- cassa e manico
(Lega alluminio pressofuso EN 1774)
- Ottone (per cremonese OPERA)

Trattamento PVD

Il rivestimento PVD è una recentissima tecnologia nata per aumentare la resistenza superficiale dei materiali soggetti a forte usura.

Per la caratteristica estetica particolare delle colorazioni, questo trattamento viene oggi utilizzato anche per le nostre linee di cremonesi al fine di garantire la massima inalterabilità superficiale nel tempo. Questo tipo di tecnologia, assolutamente ecologica, consiste nel deposito in atmosfera controllata di uno strato di Nitruro di Zirconio (vantaggiosa alternativa alla classica cromatura galvanica, fortemente inquinante...).

I vantaggi del rivestimento PVD sono:

- Grande resistenza all'abrasione
- Grande resistenza alla corrosione
- Colori duraturi e inalterabili nel tempo (resistenti alle elevate temperature)
- Aumento dell'effetto estetico
- Assenza di effetti inquinanti

L'utilizzo del rivestimento PVD, quindi, contribuisce a migliorare l'aspetto estetico/installativo delle nostre cremonesi, che per le loro linee e le finiture si adattano per applicazioni su infissi importanti.

Materials

All lines are made out of first-rate materials and undergo stringent quality controls (MEDAL is ISO 9001 certified).

MEDAL cremona bolts come in the following materials:

- die-cast aluminium;
-internal mechanisms (12-15 ISO EN 1774 Standard zamak)
- closure and handle (EN 1774 Standard die-cast aluminium alloy)
- brass (for OPERA cremona bolt)

PVD coating

PVD coating is a recently applied technique that enhances material surface resistance and is hence an especially suitable treatment for heavy-duty items. What's more, the treatment confers an appealing colour. That's why MEDAL has also adopted the technique for its cremona bolt lines, thus combining good looks with maximum surface resistance over time. The treatment is wholly environment-friendly and consists in applying a zirconium nitride layer under controlled atmosphere conditions, an undisputed improvement over the traditional and highly polluting chromium plating technique....

Other advantages of PVD coating include:

- high abrasion resistance;
- high corrosion resistance;
- long-lasting and persistent colours capable of safely withstanding high temperatures;
- enhanced appearance;
- no processing-derived pollution.

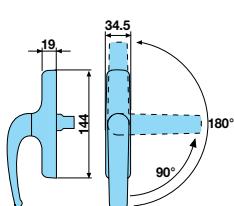

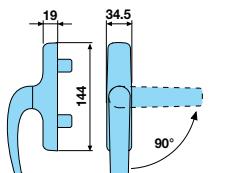

PVD coating is decidedly an aesthetic enhancer making for easy adaptation to all installation requirements. The special colours and materials used for our cremona bolts subject to this treatment make them especially suitable for installations calling for an extra touch of refinement.

** E' possibile ordinare la linea maniglioni in alluminio o nylon con altre colorazioni RAL (vedi cartella colori principale) concordando prezzo, quantità e tempi di consegna.
Aluminium and nylon panic bars are available in other RAL colours on request (see main colourcard), subject to prior price, quantity, and delivery time agreement.

OPERA

**Versione disponibile per apertura a 90° e 180°
Available in 90° and 180° opening versions**

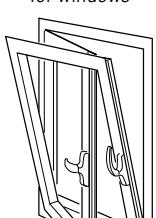

Opera è per MEDAL la cremonese per eccellenza. Da più di 15 anni un successo incontrastato per un prodotto che ha segnato una svolta nelle linee delle cremonesi. Prodotta in centinaia di migliaia di pezzi, è ancora oggi un punto di riferimento per tutti i serramentisti. E' disponibili in tutte le colorazioni RAL con trattamenti galvanici e nella versione in ottone anche per infissi legno/alluminio.

Opera by MEDAL: the paragon in its sector. In over fifteen years of success this milestone in the evolution of cremona bolts has become the undisputed market reference in its sector. With hundreds of thousands of pieces produced, it is still today preferred by discerning builders and installers worldwide. Available in all RAL colours with electroplating and in the brass version also for wood/aluminium casement windows.

MEDAL s.r.l. reserves the right to modify the technical characteristics of the products illustrated in this catalogue at any time and without prior warning.

OPERA VIP è l'evoluzione della cremonese OPERA e ridefinisce il concetto di cremonese stessa. Le sue caratteristiche sono così innovative da avere rivoluzionato i "vecchi" concetti tecnici legati a questo tipo di accessorio.

- I principali vantaggi di questo nuovo sistema di cremonese sono:
- ottimizzazione del magazzino
 - migliora le fasi di lavorazione in quanto permette di accoppiare il gruppo di movimentazione durante la preparazione dell'infisso senza la preoccupazione di rovinare la cremonese
 - facilita il trasporto degli infissi in quanto non c'è l'ingombro del manico
 - si assembla la "cassa manico" solo a lavori finiti e della colorazione scelta dal cliente.

È a montaggio universale su finestre, persiane, scorrevoli, anta/ribalta. Si utilizza con profili piani, arrotondati o legno/alluminio. È una meccanica collaudata da migliaia di installazioni

OPERA VIP is the evolution of the OPERA cremone bolt and redefines the actual concept of the cremone bolt. Its features are so innovative that they have revolutionised the "old" technical concepts connected with this type of accessory:

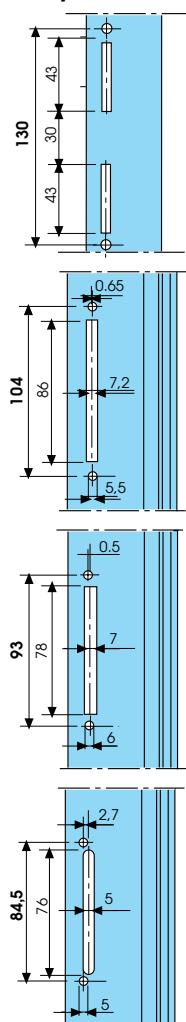

Chief advantages of the new cremone bolt system include:

- store optimisation
- improved workability thanks to possibility of safely linking up the mechanism during window set-up without any risk of damage
- easy handling and transport as less cumbersome thanks to lack of handle fitting
- "handle casing" fitting only after completion of installation.

Universal fitting on windows, shutters, sliding windows, tilt/turn windows.

Tried and tested mechanism on thousands of installations

Interassi e predisposizioni forature/Centre distances and hole positions

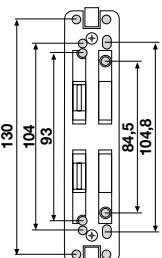

È disponibile in versione "standard", con chiave, con manico asportabile, in diverse e originali colorazioni

Available in the "standard" version, with key and with removable handle, in various original colours.

La MEDAL s.r.l. si riserva la facoltà di modificare in qualsiasi momento e senza preavviso le caratteristiche tecniche dei prodotti rappresentati nel presente catalogo.

MEDAL s.r.l. reserves the right to modify the technical characteristics of the products illustrated in this catalogue at any time and without prior warning.

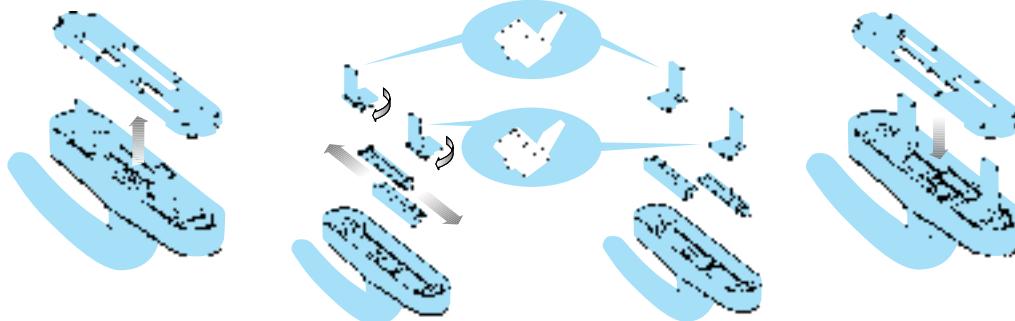

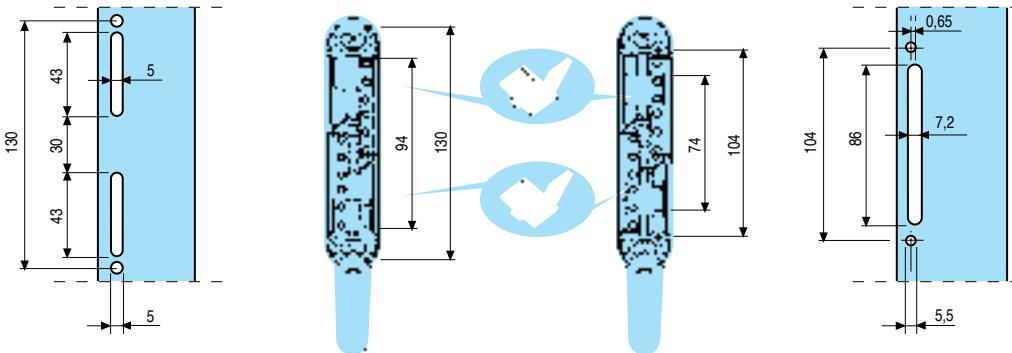

**Inversione del senso di apertura sempificato
Easy opening-side reversal**

Nuova Cremonese in alluminio pressofuso verniciato dalle dimensioni compatte e caratterizzata da una linea filante adatta per ogni tipo di infisso in alluminio. Viene fornita montata per apertura destra con interasse 130 (predisposizione per interasse 104). Ambidestra con apertura a rotazione di 90°, completa di scatto di posizionamento.

New compact cremona bolt in painted die-cast aluminium featuring flowing lines ideal for all aluminium windows. Comes mounted for opening to the right with a centre distance of 130 (adjustable to 104). 90° ambidextrous rotation to open, complete with positioning jumper.

Interassi e predisposizioni forature/Centre distances and hole positions

DUETTO

Per aperture interne ed esterne

Le linee morbide e filanti e le dimensioni particolarmente compatte (solo 29 mm di ingombro) rendono DUETTO una cremonese ideale per tutti i profili e per ogni esigenza installativa in aperture esterne/interne (finestre, persiane) in una vasta gamma di colorazioni.

Duetto unisce il successo estetico delle linee MEDAL e le innovative caratteristiche tecnico/meccaniche della linea VIP

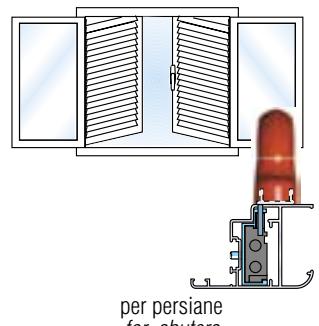

Può essere montata dopo l'installazione dell'infisso permettendo un trasporto più comodo degli infissi stessi.
Evita il rischio di danneggiamenti durante il trasporto o la posa, in quanto si monta in modo semplicissimo, il gruppo di movimentazione e solo a lavori ultimati si assembla la "cremonese"

For in- and outside opening

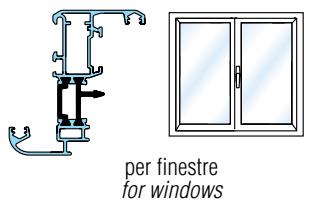

Thanks to its soft and flowing lines and space-saving size (only a compact 29 mm large), DUETTO always comes out on top, regardless of section size and how demanding installation requirements may be. Ideal wherever in-/outside opening is desired for windows or shutters, DUETTO is available in a wide colour range. Sporting the characteristic good looks of all MEDAL brand products, DUETTO also incorporates the innovative technical and mechanical features typical of the VIP line.

May be fitted after frame mounting thus making frame handling easier. Minimised damage risk during handling and mounting thanks to easy fitting of mechanisms and of cremona bolt only after all parts have been fully installed.

BRACCIO INOX

Inalterabile nel tempo perché costruito completamente in acciaio inox e completo di nottolino di chiusura, posizionato vicino alla cerniera per ridurre i giochi e irrobustire la chiusura stessa e dispositivo di frizioneamento, in apertura e chiusura, che impedisce all'anta di aprirsi o chiudersi inavvertitamente per colpi di vento.

STAINLESS STEEL ARM

Wear-and-tear resistant and long life thanks to fully stainless steel construction. Other sturdy construction features include ratchet positioning in proximity to the hinge to reduce clearance and reinforce the closing mechanism itself and strengthen the clutch device that prevents the casement from being thrown open or slammed shut by a gust of wind.

DISPOSITIVO ANTI-FALSA MANOVRA

Un dispositivo di sicurezza evita qualsiasi manovra accidentale che possa danneggiare il meccanismo o mettere in pericolo l'utilizzatore.

IMPROPER OPERATION INHIBITOR

This special safety device prevents improper accidental operations that may risk damaging the mechanism or injuring the user.

La MEDAL s.r.l. si riserva la facoltà di modificare in qualsiasi momento e senza preavviso le caratteristiche tecniche dei prodotti rappresentati nel presente catalogo.

MEDAL s.r.l. reserves the right to modify the technical characteristics of the products illustrated in this catalogue at any time and without prior warning.

MECCANISMO ANTA RIBALTA MECHANISMS FOR TILT/TURN WINDOWS

ASTRA è un nuovo meccanismo per ANTA RIBALTA per infissi a squadro dalle caratteristiche tecniche uniche in quanto studiato per semplificare il lavoro dell'installatore. Poche operazioni per il montaggio, ampie regolazioni, qualità dei materiali e sicurezza nel funzionamento.

ASTRA is a new and original mechanism for bevel-edged fixture TURN-AND-TILT CASEMENTS especially designed for making the installer's job easier. Only a few, simple operations and the job is done! A wide adjustment range makes for hassle-free fitting. High quality materials and full operating safety complete the advantages ASTRA has to offer installers and users.

DISPOSITIVO ANTICADUTA

Permette di migliorare il funzionamento dell'anta a Wasistas impedendo alla stessa di fuoriuscire e limita nel contempo i tentativi di effrazione dall'esterno quando l'anta è aperta a Wasistas.

DROP PREVENTION

SAFETY DEVICE

Improves hopper window operations preventing casement over-projection while at the same time effectively burglar-proofing when casement is ajar.

SERRATURA PER APERTURA A WASISTAS

Consente la normale apertura dell'anta solo con la chiave senza impedire l'apertura della stessa nella posizione a wasistas.

HOPPER WINDOW ROUTINE OPENING LOCK

Permits standard casement opening only with the key without restricting the hopper opening mode.

REGISTRAZIONI PERFETTE PER MONTAGGI FACILITATI

Un grano di registro, posizionato nel supporto cerniera inferiore, consente una regolazione da -05 mm a + 1,5 mm rispetto alla quota della luce camera.

EASY FITTING THANKS TO PERFECT ADJUSTMENT

An adjustment dowel located on the bottom hinge support permits -05 mm to + 1.5 mm adjustments with respect to daylight aperture dimensions.

La regolazione si effettua tramite i vari nottolini di chiusura PERIMETRALE e fino a 1,5 mm rispetto alla quota della luce camera.

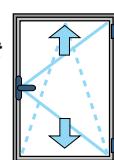

Adjustments are made by acting on the PERIMETER ratchets up to 1.5 mm with respect to daylight aperture dimensions.

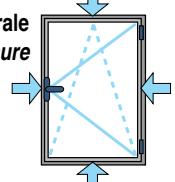

Una vite di registro sul braccio permette la regolazione della caduta LATERALE laterale.

An adjustment screw on the arm permits SIDEWAY drop adjustment.

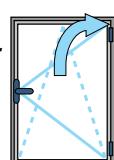

Altezza anta
Casement height

Pressione perimetrale
Perimeter pressure

Camera laterale
Side chamber

DISPOSITIVO ANTIEFRAZIONE

INCONTRO E NOTTOLINO

Migliora la tenuta dell'infisso in eventuali tentativi di scasso. È costituito dall'incontro a gancio, da applicare al telaio, e dal nottolino a fungo da applicare all'astina.

BURGLAR-PROOF DEVICE

STRIKER AND RATCHET

Improves casement seal and burglar-proofing. Consists of a hooked striker for securing to the frame and a mushroom ratchet for fitting to the rod.

CREMONESE CON CHIAVE

Al sistema per anta e ribalta ASTRA è possibile applicare la cremonese OPERA VIP con chiave (vedi). Con questa cremonese è possibile bloccare il manico nelle varie posizioni di apertura o chiusura.

CREMONESE CON MANICO ASPORTABILE

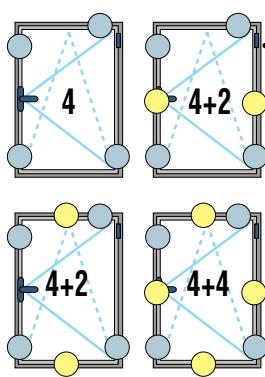

Al sistema anta e ribalta ASTRA è possibile applicare cremonese OPERA VIP con manico asportabile. Particolarmente utilizzabile in contesti ricettivi pubblici (scuole, ospedali, case di cura, ecc...) rende possibile l'apertura dell'infisso SOLO a chi è autorizzato.

KEY-OPERATED CREMONESE BOLT

The ASTRA casement turn-and-tilt system may be mounted with the key-operated OPERA VIP cremone bolt (see). The latter permits handle locking in several opening and closing positions.

CREMONESE CON MANICO ASPORTABILE

The ASTRA casement turn-and-tilt system may be mounted with the OPERA VIP cremone bolt with detachable handle. The configuration is especially suited to such public venues as schools, hospitals and nursing homes, to name but a few, where for safety reasons OPENING of the window needs to be RESTRICTED to authorised personnel only.

CHIUSURE SUPPLEMENTARI

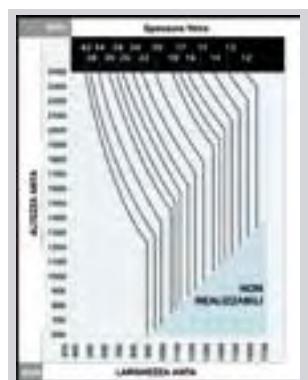

ASTRA permette l'incremento del numero di chiusure per lato con l'ausilio di dispositivi supplementari per le chiusure verticali e orizzontali. Il sistema consente l'installazione della chiusura supplementare anche dopo la posa in opera (un semplice foro di Ø8 mm e fissaggio di nottolini registrabili). I punti di chiusura possono essere 4, 6 (4+2), 8 (4+4).

ADDITIONAL LATCHES

ASTRA is set up for fitting with additional top, bottom, and side latches.

The advantage is that additional latches may be fitted even after mounting by simply drilling 8-mm holes and securing the adjustable ratchets up to the desired number. Lock points may be 4, 6 (4+2), 8 (4+4).

DIMENSIONI INFISSI E PORTATE WINDOW SIZES AND LOAD BEARING CAPACITIES

ASTRA è un meccanismo che permette la realizzazione di infissi a Wasistas di dimensioni variabili. La tabella indica chiaramente le portate in funzione delle dimensioni e dello spessore del vetro utilizzato.

Larghezza anta = minima 375 mm, massima 1700 mm
Altezza anta = minima 600 mm, massima 2400 mm

Attenzione:
l'impiego di vetri con spessori fino a 12 mm, (pari a 30 Kg/m²) consente di sfruttare le dimensioni massime illustrate. Con un'ante di larghezza 130 mm e altezza 1200 mm lo spessore del vetro deve essere di 18 mm.

ASTRA is capable of accommodating different size hopper windows. Load bearing capacity as a function of pane size and weight is given in the table.

**Casement width = minimum 375 mm, maximum 1700 mm
Casement height = minimum 600 mm, maximum 2400 mm**

Note:
Maximum specified sizes are compatible with up to 12 mm thick panes (equal to 30 Kg/m²). A 130 mm wide and 1200 mm high window frame may accommodate a 18 mm thick pane.
